The Mathematics Of Lottery Odds

If the powerball is drawn from a pool of numbers different from the main lottery, the odds are multiplied by the number of powerballs. For example, in the 6 from 49 lottery, given 10 powerball numbers, then the odds of getting a score of 3 and the powerball would be $1 \text{ in } 56.66 \times 10$, or 566.6 (the probability would be divided by 10, to give an exact value of $8815 \frac{4994220}{10}$...

How to Win the Lottery According to Math - Lotterycodex

Each week for the last 6 years (2012-2018), I was playing the lottery to win. Not just hoping to win — playing with a 'positive expected value' (a mathematical expectation to win rather than lose, on average, over time). In June 2018 this particular window of opportunity closed, so I've decided to share more about the winning model and reveal some closely guarded secrets from the ...
